IN THE CLAIMS

1. (Currently amended) A golf bag comprises:

a bag body, ~~wherein the bag body has~~ with a front side toward the direction in which  
the bag tilts and a back side opposite, having

\_\_\_ an inner storage rack which comprises

\_\_\_\_\_ a top frame,

\_\_\_\_\_ a ~~middle~~ lower frame, a bottom ~~connected to the top frame, by~~ a plurality of  
support rod frame rods,

\_\_\_\_\_ an engaging body with an upper portion and a lower portion, attached to the  
lower frame at the front side of the bag body, the engaging body having a  
retainer projection extending outward from the bag body and a release  
projection extending outward from the bag body,

\_\_\_\_\_ a base frame, which contacts with the ground under the bag ~~provided between~~  
~~the top frame and the middle frame,~~ and

a joint block for stably coupling the ~~middle frame~~ lower frame and the ~~bottom~~  
base frame at the back side of the bag body;

a tilting device, pivotably connected to an exterior front side of the base frame, ~~wherein~~  
~~the tilting device comprises~~ comprising

\_\_\_\_\_ a fixed leg tilt control body having

\_\_\_\_\_ a notch and a retainer formed in an upper portion,

\_\_\_\_\_ a tubular passage formed on the interior, and

\_\_\_\_\_ a pair of steel wires extending therefrom upward from said upper portion, the  
fixed leg having

\_\_\_\_\_ a moveable shank ~~release shank,~~ ~~therein, a notch formed in the upper portion of~~  
~~the moveable shank and a support feet formed~~ disposed interior of the  
tubular passage, and having a control foot at the ~~a~~ lower portion thereof to

- push the ~~moveable shank~~ release shank to move up and down relative to the fixed leg tilt control body; and
- a support ~~bracket~~, having an upper portion attached to an exterior front side of the upper frame by a first pivot, a middle portion attached to an upper end of each of the pair of steel wires, and a lower portion for contacting the ground to support the bag body in a tilted position;
- wherein when the bag body is in an upright position the tilt control body engages with the engaging body to support the front side of the golf bag in the upright position, and when the top of the bag body is tilted toward the front side, the control foot contacts a ground surface and pushes the release shank upward, causing the tilt control body to disengage from middle frame having a  $\Sigma$ -shaped frame the engaging body which can disengage with the notch through the push of the moveable shank thereby deploying said support to stabilize the golf bag in a tilted position; and
- wherein the base frame remains in full contact with the ground, both when the bag body is in the upright position and when the bag body is in a tilted position.
2. The golf bag as claimed in claim 1, wherein the ~~bottom frame~~ base frame has a flat bottom surface and the control foot ~~there is a distance from the support foot to above~~ a bottom surface of the ~~bottom~~ base frame.
  3. The golf bag as claimed in claim 2, wherein the  ~~$\Sigma$ -shaped frame~~ engaging body comprises an upper edge retainer projection on an upper portion and a lower edge release projection on a lower portion with a space in a middle portion to accommodate the retainer of the tilt control body, and the  ~~$\Sigma$ -shaped frame~~ retainer projection of the engaging body clasps the notch retainer of the tilt control body through the upper edge thereof.
  4. The golf bag as claimed in claim 3, wherein the upper edge retainer of the tilt control body is released from the notch retainer projection of the engaging body by

~~using~~ when a protrusion on the ~~moveable shank~~ release shank ~~to push is~~  
pushed against the bottom edge release projection of the engaging body.

5. The golf bag as claimed in claim 4, wherein the top frame has a first pivot, and the ~~support bracket~~ support is provided with ~~two feet, which~~ and are ~~is~~ linked with the top frame by a the first pivot.
6. The golf bag as claimed in claim 5, wherein each of the two feet also has ~~another~~  
~~pivot~~ second pivot in middle thereof, and through the ~~pivot~~ second pivots the steel wires connect with the ~~support bracket~~ support.
7. The golf bag as claimed in claim 5, wherein the ~~bottom frame~~ base frame ~~also is~~  
pivotably connects connected with the fixed leg tilt control body ~~by an~~  
~~additional pivot~~, and the Σ-shaped frame engaging body and the ~~notch~~  
retainer are nestingly positioned face to face.
8. The golf bag as claimed in claim 5, wherein the bag body further includes an outer wrappage to enclose the inner storage rack.
9. The golf bag as claimed in claim ~~5~~ 8, wherein a decorative cover is mounted on the outer wrappage.
